STATEMENT OF PURPOSE

Introduction:

¹¹ I have always believed in setting a goal, focusing on it, achieving the goal, and then setting another goal again to achieve it. One of my goals in life is to gain valuable knowledge and experience in the field. My goal is not just to compete in the rat race of survival of the fittest, but to set high standards and slowly and wisely work my way up to them. I would like to improve myself and my skills to the next level to achieve higher professional roles in my future career. I believe that success has to be earned. ¹⁰ I hope to work for a company to gain new skills and get an idea of how I can contribute to the organization.

Education:

⁷ Hello, my name is Madiraju Manoj Kumar. I want to pursue master's in information technology from your esteemed university. Through this application, I want to provide you with a list of my academics, personal background, qualities, my source of inspiration and goals for graduate studies. I am well prepared personally and academically.

In 2020 I completed my Bachelors in Electronics and Communication Engineering from Anurag Group of Institutions, affiliated to Jawaharlal Nehru Technological University Hyderabad with 8.48/10, Intermediate from Sri Chaitanya Junior College in 2016 with 81.7% and Tenth Grade from Vijaya Ratna Concept School in 2014 with GPA 9.7/10. My technical skills include web technologies: HTML5, CSS3, JavaScript, Prime Faces (JSF), programming languages: JAVA 8, C programming and back-end technologies: Core Java, Advanced Java (Maven, Spring Boot and Spring MVC) and MySQL databases. I also got certified in Java Programming Course through Udemy in April 2021. As for my qualities, I am a hardworking student and cooperative with everyone. With good participation, I am always ready to learn new things. I have always participated in all activities in school and college.

Why MS in information Technology:

⁸ The scope of Information Technology continues to grow and improve, becoming increasingly common as businesses of all sizes and analytical skill levels get into the big data game. Information Technology research requires the right focus, the best technology, the right people, a clean culture, and the best management commitment. There are many options like MS Business Analytics, MiM, MFin etc. Management Information Technology is also an excellent choice in terms of jobs. An MIS degree can open several career paths, including web

development, information technology analysis, and management analysis. Jobs in business and information technology are in high demand in many companies, so degrees in this field are valuable.

2 Computers and information technology are the most influential driving forces for the creation of a futuristic civilization. However, it is essential to keep up with the shifting currents in technology to stay afloat as an IT professional. I would like to capitalize on my industry knowledge through the MS in Information Technology offered by the prestigious Arizona state University.

2 As a practical student, I approached academic projects as opportunities to enhance my understanding. For a project in my final year of study, I developed software capable of indexing documents from a file system. I came up with the idea for the project when our school staff complained about the difficulty of maintaining files in the institution's system and quickly retrieving them as needed. To make the project reliable, I built a component that would automatically extract text data from images and merged documents using text mining and NLP.

3 Thanks to my professional experience, I realized the scope and potential of Information Technology. I have closely witnessed the role Information Technology play in making efficient and intelligent market decisions. Since most businesses are driven by conclusions made after analyzing large amounts of data, I have come to understand that having intelligent and efficient systems is critical to success. In the courses of my professional life, I have learned that there are many opportunities for me in the field.

6 I am sure the practical exposure in your university will help in overall personality development. It will also help me broaden my horizons and look for international opportunities. Now I am confident enough that if I get the opportunity to study in your university, I will focus on knowledge operations that make sense of career studies from related information for decision making.

Why USA:

1 The USA universities and colleges have earned these top spots for their high academic standards, rigorous coursework, and quality of education, among other things. Each of the American educational institutions offers several programs that are very well evaluated internationally. One of the many advantages of studying in the US for Indian students is the variety of programs and courses. The US has the most prestigious, top-rated higher education

systems in the world, eclectic cities and beautiful natural parks, culture, history, and a very multicultural population. Its universities and colleges consistently gain leading positions in world rankings. In the USA, we can find a wide range of schools, countless fields of study, and special degrees. The US education system provides not only a choice in terms of program types, but also in the type of educational institutions. The variation and number of options reflect the diversity and enormity of America's universities in the US, which pride themselves on being at the forefront of technology, research, and engineering. They ensure their students have access to the best possible equipment and resources. The land and people of the US are also incredibly diverse. Wherever we choose to study, we will find a regional culture rich in history and local traditions. Studying at the best universities in the USA automatically brightens our chances for a better future. Good international exposure, practical knowledge and experience gained by studying in the USA are attributes that are highly sought after by employers across the planet.

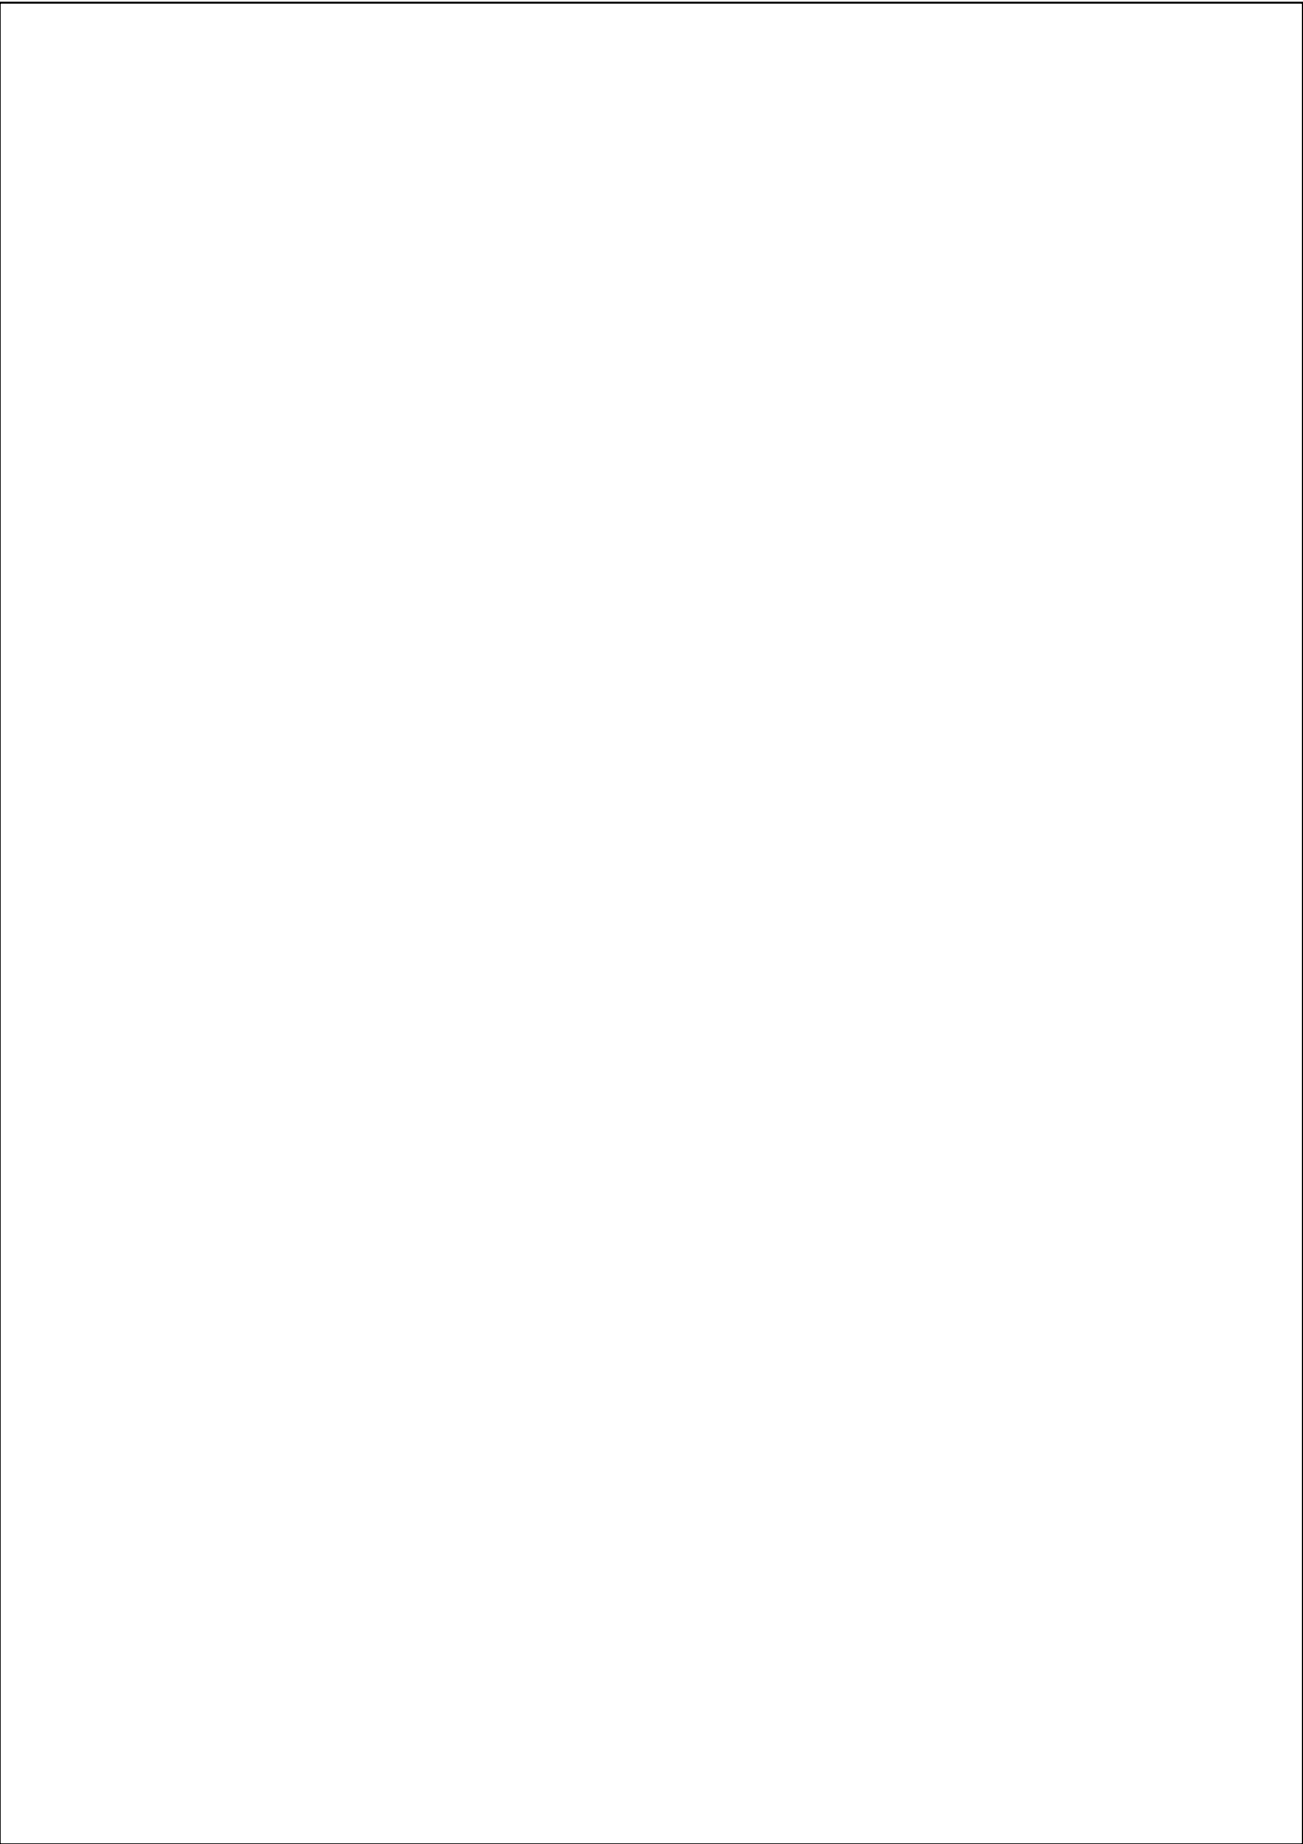

Why Arizona State University:

I always believe that the essence of higher education lies in the synergistic relationship between the student and his department. I believe that graduate studies at your university will be the most logical extension of my goals. I can assure you of total commitment, dedication and hard work. I am confident that the quality education I am receiving at your university will enable me to face challenges throughout my career. When I started looking for the best university for me, I found that Arizona State University was perfect for me because it had a highly advanced curriculum that offered its students a variety of learning options based on pragmatic training and skill development. I was deeply impressed by the growth-oriented, student-specific style of pedagogy that the university adopted. On learning more about it, I found that the university has a vast and state-of-the-art academic infrastructure that also helps students pursue research interests. I was also impressed with the research work and study of some of the university's faculties. I immediately realized that the program at the university would surely provide me with adequate study opportunities that would set me on the right path to realize my career goals in the field of MS in Information Technology.

Conclusion:

My goal is to make a name for myself in my field of interest by diligently contributing great ideas and translating them into final applications and products. Thank you for this opportunity and we look forward to your positive response.

Manoj Kumar Madiraju
